

## FB2080E

The flatbed scanner FB2080E is an A4 size book edge scanner for sparing scanning books. It is a perfect companion for every library, where books are frequently scanned.

The scan starts less than 2 mm from the outer edge of the book. The angular edge avoids book spine shadows, text distortion, cutting books apart, pressing books flat and the damage of the books spines.

Specifications are subject to change without prior notice.
